

Ahmed Haracic

SOFTWARE ENGINEER & PROJECT MANAGER

Profile

A student with a passion for creation, mathematics, software, philosophy, psychology, economy, and music.

Ideally, what I want to do most in this world is help aid in the construction of tomorrow the best I can.

Employment History

Project Manager & Lead Engineer, Kibii LLC, Remote

JANUARY 2021 – PRESENT

We're working on a project to bring the world of vr to the real world, to establish a marketplace where vr creators, much like regular artists, can make steady income selling their work in a safe, copyright-protected manner. My role here is organizing and helping out the developers, as well as writing the specifications and architecting the project.

Contracting Consultant, USAID, Sarajevo

AUGUST 2020 – AUGUST 2020

I worked on writing a software requirement specification (SRS) for a project related to taxing and calculating the usage of water and electricity in the city. The experience was less than enjoyable, since I didn't correspond with USAID directly but rather went through a proxy.

Frontend & ML Engineer, Vacuna & US Gov, Remote

JULY 2020 – SEPTEMBER 2020

To aid clinics in the pandemic crisis, we created an automatic scheduling system for vaccinations. I created the front end using technologies like React, Redux, and a python google cloud run instance for drivers' license validation using ML. The project was funded with money from the US Government.

Miscellaneous Freelance Work

MAY 2020 – PRESENT

I do some odd jobs for money here and there, with my clients being mostly regular people trying to start projects. I mainly build the software myself, from mockup to production.

Frontend Developer, Avy, Remote

DECEMBER 2019 – JULY 2021

I worked with a team of three developers to build a product called Avy using React, Redux, and Typescript. The product had a social aim of connecting people through split profile pictures which were quite the trend at the time. I integrated functions such as uploading, saving, sharing pictures, and a payment system to support creators.

Software Engineer, Hotter, Remote

JUNE 2019 – SEPTEMBER 2019

This was my first job, I came on as a full-stack engineer to build an advertising abstraction for earning various in-game currencies. The product was a website, one I built using PHP and vanilla HTML / CSS / JS. The project went on to net me around \$2000, the first money I'd ever made.

Hobbies

I adore playing / listening to music, stuff like jimi hendrix, pink floyd, and all the blues. I've recently gotten a bit into chess. I'm currently working on reconstructing a garage I'm buying to serve as a personal workshop and a practice room for awfully loud music.

Education

IBDP, Druga Gimnazija Sarajevo

SEPTEMBER 2019 – JUNE 2022

I am currently attending the IBDP programme, with my university goal being Stanford. I'm studying Mathematics, Economy, Psychology, English & Literature, Physics, and Computer Science.
